Well, I understand the Basics and the Powers of OpenVZ now.
I found out How Powerful it is and I am really happy with it.
The problem is, how can I enable NFS I have been googling but for some reason It just doesnt work.

I have read the following documents:

<To Learn About NFS>

<http://nfs.sourceforge.net/nfs-howto/ar01s01.html>
[http://www.crazysquirrel.com/computing/debian/servers/nfs.js px](http://www.crazysquirrel.com/computing/debian/servers/nfs.jspx)

<To Learn About NFS in OpenVZ>

http://gentoo-wiki.com/HOWTO_Share_Directories_via_NFS
<http://wiki.openvz.org/NFS>
http://wiki.openvz.org/NFS_server_inside_VE
<http://forum.openvz.org/index.php?t=msg&goto=23355&Man-Pages>

Anyhow, after reading that I found out that I can make a NFS share with OpenVZ quite easy.
By using the command `vzctl set 1 --features "nfs:on" --save`
I got the error that `--features` doesnt exist.
So, well..
How can I enable NFS in a VirtualPC thats made by OpenVZ?

Cheers,
Robin
