Subject: Dump is much faster than restore
Posted by dagr on Tue, 20 Nov 2007 12:39:42 GMT

I played around online migration and noticed that

vzctl restore $name --undump --dumpfile img_file takes about 2.5 s (on another host) , whereas

chkpnt $name --dump --dumpfile img_file - only 0.2s .

Is it normal behaviour ?   (2.6.18-8.1.15.el5.028stab047.1PAE)
