Seems that story repeats.

```
# ../kernel-patches/all/apply/opensvz
```

```
START applying opensvz patch (OpenVZ kernel patch for virtual server support)
```

```
Testing whether "OpenVZ kernel patch for virtual server support" patch for 2.6.18 applies (dry run):
```

```
1 out of 1 hunk FAILED -- saving rejects to file fs/bad_inode.c.rej
```

```
"OpenVZ kernel patch for virtual server support" patch for 2.6.18 does not apply cleanly
```

This is today sources, fetched from repository according to instructions per building kernel on Debian.
