after reading that I found out that I can make a NFS share with OpenVZ quite easy.

By using the command `vzctl set 1 --features "nfs:on" --save`

I got the error that `--features` doesn't exist.

So, well..

How can I enable NFS in a VirtualPC that's made by OpenVZ?

What kernel are you using? You need 2.6.18 or newer for NFS to work.
