MemoryError - That's a clue.

So are these fail counts:

```
>privvmpages      66  
>tcpsndbuf        9236  
>tcprcvbuf        2428
```

Up those limits and you should be A-OK.

That limit is about 260 MB, and I notice that the limit in your conf file is about 200. If I recall, TurboGears can be a bit of a memory hog, and you'd be best increasing the limit until things run smoothly, before trying to lower the limits.
