Hi,

As stated in the bug report #740 (http://bugzilla.openvz.org/show_bug.cgi?id=740), I have problems when using xfs_quota on an OpenVZ kernel, installed through <http://download.openvz.org/debian>.

Kernel being used is:

```
# dpkg --get-selections | grep openvz
```

```
ii linux-image-2.6.18-openvz-amd64 028.18.1-2.6.18-12-1
```

I am not sure this really is a bug but when using the stock-debian kernel it does work.

Any suggestions or hints are welcome..

cheers,
stoffell
