Hi, I'm still having this issue.. I've bypassed the quotas issue by deleting the links, creating the quota files with "quotacheck -a", and fixing the cpanel with "/scripts/fixquotas".. but still each time the server or vz service reboots, this rollback, deletes the quota files and remakes the broken links.. so I've to wait another half an hour for each vps to be fixed.

Do you know any way to recreate the quotas keeping the link file, or avoiding the aquota files for being deleted and pointed nowhere?
