Hi,

1. The current problem occurs in `"/usr/share/vzpkg/functions"` in `os2full` function.
2. To avoid a problem I advise you to create a new template cache just type `"vzpkgcache fedora-core-6"` and then you get in `/vz/template/cache` directory appropriate cache (but it takes some time!).

P.S.(!!!)

But if you can wait a little time I think that you receive the full answer and the decision in this forum.
