Hi:

Thank you for your reply!

Well, in terms of what modules I needed in the 2.6.18, networking, sound and nvidia where both not present in the default ovz 2.6.18.

I have worked around this problem for now using a precompiled 2.6.18 that I found yesterday, but I would prefer to have the latest 2.6.22 with sound, network and video support compiled in, I am getting the sense that this won't be the case and that I will have to rebuild any packages that I really want to use with my customer built kernel.

I will give your instructions a try and will post my success/failures.

Cheers
