Well I got openVZ up now.

Debian with a Gentoo box inside.

The gentoo box runs Apache but it keeps getting:

The connection has timed out

The server at x.x.x.x is taking too long to respond.

- * The site could be temporarily unavailable or too busy. Try again in a few moments.
- * If you are unable to load any pages, check your computer's network connection.
- * If your computer or network is protected by a firewall or proxy, make sure that Firefox is permitted to access the Web.

Well so I check all the possible problems.

is it the website bad coded?

No its not its phpmyadmin, thats stable.

Out of RAM? (free -m) no I got 31 in use and 160 free so thats not the fact aswell.

Firewall or Proxy?

No.. Since I do see one half of phpmyadmin..

OpenVZ? umm that can be the problem.

So, well is it?

And how to fix?

Cheers,

Robin
