---

Hi,I have same problem but there's no /etc/vz/vz.conf, no idea about where could it be.

Anyway, I'm using a provider VPS, so i don't know if problem is in node on inside my VPS.

Any idea?

```
[root@swol~]# iptables -t nat -A PREROUTING -p tcp -d 10.20.30.40 --dport 40 -j DNAT
--to-destination 10.20.30.50:70
```

```
iptables v1.2.11: can't initialize iptables table `nat': Table does not exist (do you need to insmod?)
Perhaps iptables or your kernel needs to be upgraded.
```

```
[root@swol~]# iptables -L -t nat
```

```
iptables v1.2.11: can't initialize iptables table `nat': Table does not exist (do you need to insmod?)
Perhaps iptables or your kernel needs to be upgraded.
```

Thanks in advance =)
