Hello.

Please, specify

1) which kernel do you use

2) which host OS do you use

3) which templates do you use for VE 1080 and 1081 (and where did you get these templates)

4) did these VEs work fine before? Or you have just created them and faced mentioned problems?

5) post your /proc/user_beancounters (from Hardware Node). You can check it yourself - if there any failcounters - they ought to be eliminated.

6) check if there are following files (ls -Flai):

/vz/private/1080/etc/group

/vz/private/1081/bin/bash

Thank you.
