Hi,
I am sorry to push up that thread again, but:
I really need a clue how to get this working!
I really need the Live-Migration for a Linux-
Terminal-Server-Project like setup.
Is there somebody out there using the Live-
Migration feature of OpenVZ, if so
how do you share the private Areas of the VEs?

Has somebody a clue on where to look at to solve
the NFS Problem? I am not afraid of code...

Thanks again, Moritz
