Subject: CPU usage/load on host

Posted by esoterik on Sun, 02 Dec 2007 07:58:45 GMT

Running webmin on the host node (centos 4.5) shows me a 98.7% CPU usage consistently while running one idle ubuntu 7.10 minimal VPS with extremely limited resources,

I didn't see anything about this in the documentation, was wondering if this high load/cpu usage (by the init process) was normal on the host node? Pretty new to all this stuff so if you have any suggestions assume I know next to nothing
