..

I think I saw some bridge code that calls it, too.
Regardless, it's EXPORT_SYMBOL(), but now unusable
due to the GPL-only symbol "init_net".

Meanwhile, you are avoiding answering the question:

>>>> And what should code be passing in when "# CONFIG_NET_NS is not set" ?
..

>> and many want to do register_netdev().
>
> I haven't even touched register_netdev.
..

Bull-pucky. Somebody did:

> @@ -3361,6 +3595,8 @@ int register_netdevice(struct net_device *dev)
>
>   /* When net_device's are persistent, this will be fatal. */
>   BUG_ON(dev->reg_state != NETREG_UNINITIALIZED);

```
> +      BUG_ON(!dev->nd_net);
> +      net = dev->nd_net;
>
>       spin_lock_init(&dev->queue_lock);
>       spin_lock_init(&dev->_xmit_lock);
..
```

That new BUG_ON() line complains if nd_net has not been initialized,
and the only thing I see drivers putting there is GPL-only "&init_net".

>> So what should they be using there ?
>
> What are you having problems with?
..

Avoiding the question again there, too.

I personally am not having problems with anything.
But I noticed the API change, and would like somebody to fix it.
Any of the three ways (or a fourth, if you've got one) might do.

Cheers
