I have a binary module that uses `dev_get_by_name`...it's sort of a
bridge-like thing and
needs user-space to tell it which device to listen for packets on...

This code doesn't need or care about name-spaces, so I don't see how it
could really
be infringing on the author's code (any worse than loading a binary
driver into the kernel
ever does).

I would certainly prefer to not have to patch around any problems with
calling `dev_get_by_name`
from a non-gpl module, but if required, I can probably figure something
out...

Thanks,
Ben
