vaverin wrote on Wed, 05 December 2007 05:57 You can find centos5 i386 precreated template here:
<http://openvz.org/download/template/cache/>

When you install this images vzyum is not working out of the box
neither i can yum update inside this images

CentOs5 was released long time ago, there should be a reason(or no) why it is not officially supported as a VE
