Subject: kernel 2.6.18 028stab051.1 supports 3gb+ RAM?
Posted by Smux on Wed, 05 Dec 2007 20:30:02 GMT

Hi all,

My server is a Dual Intel Xeon Quad-Core with 6Gb RAM and my doubt is: This kernel version supports 3Gb+ RAM ??

Actually I use kernel version 2.6.18-8.1.15.el5.028stab049.1 and I pay my datacenter to add more 2gb RAM and my dmesg show this info:

Warning only 4GB will be used.
Use a PAE enabled kernel.

Anyone knows how I do to make this new kernel to see my 6gb RAM??

Thanks in advance.
