Hey Andrey,

I compiled and installed the kernel with the debug patch.
Upgraded to 2.6.18-53.el5.028stab051.1 as well.

The error message I get (in dmesg) is:

```
CPT ERR: f5b3a000,120 :external mount: mnt rootfs / rootfs, mnt_ub 0, exec_ub 120  
CPT ERR: f5b3a000,120 :external mount: mnt /vz/private/120 / simfs, mnt_ub 0, exec_ub 120
```

Hopefully this helps you on the way.

Regards,

frodo
