Hello,

Hmm... It is strange...

I have expected to see some logs about /data/ftp, but you don't have them.

Can you please give me an access to your node to investigate this issue. If you can, then please send me credentials via PM.

BTW, can you please just try to do following on one node:

1. vzctl chkpnt VEID
2. vzctl restore VEID

Is this bug reproducible with this scenario?
