Thorsten,

I've had your fzakernel-2.6.18-686 kernel running on two boxes for a month now, and it works great. No more crashes.

I'm a little confused by something, your website also has the ovzkernel-2.6.18 kernel that appears to be the same version (028stab48.1) and is 23 minutes newer than the fzakernel. What's the difference? I tried that one, but my automounter (amd) doesn't work on the host anymore (it does work in the VEs).
