Subject: CentOS 5 template YUM problem

I'm trying to set up the CentOS 5 template found at:
http://openvz.org/download/template/cache/

Yum is not installed in this template, but also I can not use vzyum

vzyum 50 update
Warning: Set default for centos-5.0-i386 OS template not found

So I guess no one has done a 5.0 template, but rather just a working image. What is involved into making the template or just installing yum?
