Hi,

you can use vzctl to set appropriate nameserver.

Just type the command:

```
vzctl set <VEID> --nameserver <IP> --save
```

where is:

<VEID> - your VE ID

<IP> - appropriate nameserver IP

P.S.

If it will be impossible to ping google.com after this command check if it is possible to ping it using it IP address or please try to use this nameserver

```
vzctl set <VEID> --nameserver 4.2.2.4 --save
```

Thank You!
