Subject: Re: /proc/user_beancounters and vzlist giving different outputs
Posted by blunt on Sun, 09 Dec 2007 13:11:18 GMT

Does anyone have a clue on why this happens?

vzmemcheck shows 16,95Mb of usage, vzlist and /proc/user_beancouters show 17,1Mb (but not the same in bytes: 17969188 for beancounters, 17955105 for vzlist).

Which is the output I should trust of being more accurate?

thank you
