[Editid and translated to english]

Hello,

I have installed on a VE (has local IP:192.168.1.8) Ventrilo .. Used are port 3754 (UDP and TCP)..

What I did:

On creation VE

```
vzctl set 1005 --iptables iptable_nat --save;
```

emacs /etc/init.d/vz

Added below:

```
iptables -t nat -P PREROUTING ACCEPT
```

```
//- How to provide access for VE to Internet
```

```
iptables -t nat -A POSTROUTING -o eth0 -j SNAT --to MY_PUBLIC_IP
```

```
//- How to provide access from Internet to a VE
```

```
iptables -t nat -P PREROUTING ACCEPT
```

```
iptables -t nat -A PREROUTING -p tcp -d 192.168.1.8 --dport  
3784 -i eth0 -j DNAT --to-destination MY_PUBLIC_IP:3784
```

```
iptables -t nat -A PREROUTING -p udp -d 192.168.1.8 --dport  
3784 -i eth0 -j DNAT --to-destination MY_PUBLIC_IP:3784
```

```
iptables -t nat -A PREROUTING -p TCP --dport 3784  
-j DNAT --to-destination 192.168.1.8:3784
```

- In dem VE

```
/sbin/iptables -t nat -A POSTROUTING -s ! 192.168.1.8  
-o venet0 -j SNAT --to-source 192.168.1.8
```

Can anyone help me, what is here wrong?

Thank you...

Kutschka
