vzctl set 1005 --iptables iptable_nat --save;

I suppose it is incorrect. --iptables option _restricts_ set of accessible iptable modules inside VE. Withis option all other tables can be disabled inside your VE.

I would recommend You to remove list of iptables modules from 1005.conf file. In this case all iptables modules loaded on HW node will be accessible inside VE.

Thank You,
Vasily Averin
