before applying 'vzctl set 141010 --meminfo privvmpages:1'

\$ free -m

	total	used	free	shared	buffers	cached
Mem:	16220	9908	6312	0	857	7718
-/+ buffers/cache:		1332	14887			
Swap:	32735	0	32735			

after applying 'vzctl set 141010 --meminfo privvmpages:1'

\$ free -m

	total	used	free	shared	buffers	cached
Mem:	256	141	114	0	0	0
-/+ buffers/cache:		141	114			
Swap:	0	0	0			

i like the idea of this.... but why does swap/buffers/cached usage zero out?

i guess the beancounters don't keep those stats seperate?
