```
net/ipv4/tcp_timer.c::tcp_out_of_resources()
```

```
....
```

```
    if (ub_too_many_orphans(sk, orphans)) {
```

```
        if (net_ratelimit())
```

```
            printk(KERN_INFO "Out of socket memory\n");We can extract VEID from struct
```

```
sock *sk.
```

Thank you,
Vasily Averin
