„Guaranteed" (barrier) means any application in the VE can use the memory, „burst"
(limit) is the very maximum value of memory taken; memory between barrier and limit can be used
by applications running under root only.

2147483647 is the maximal value of 32-bit unsigned integer, so if you're running 32-bit
system, it's the maximum allocable memory of the OpenVZ.
