Hello,

i have a Problem with Openvz and Ubuntu 7.10. The Host System is a Ubuntu 7.10 with the 2.6.18-fza-028stab051.1-686 Kernel. In my Guest System (Ubuntu 7.10) i have only 2 Network Devices and no Local Loopback but i need this for my DNS Server.

When I Start a Debian guest i have this devices.
