I've heard that there are issues with running iptables commands from a 32-bit guest on a 64-bit host, but I've also seen at least one patch[1] submitted to help resolve this issue.

I'm running 2.6.22-ovz005 and vzctl from git. Is this still an issue in this version? Obviously I can setup iptables on the host, but it would be nice to allow the guest to control their own firewall rules.

Regards,
Cliff
