hello,

can anyone help me please?

think you have a server with 1 gb ram , 2000 gb 10mbit bw , p4 2.8 cpu ,160 gb hdd, and yo want to create a vps with 30 gb space , 400 gb bw , 2 ip (76.164.192.83 , 76.164.192.84) , min 384 mb ram and max 512 mb,min 300 mgz cpu and max 372 mgz,template centos 4, hostname :

server.mihanpars.com root pass : test ,

can you please write commands for creating this vps ? (plz from first , vzctl create)

thanks
