So having gotten my server back up, I'm looking to test out 2.6.24, but I'm a bit confused: I pulled the git tree using:

```
git clone git://git.openvz.org/pub/linux-2.6.24-openvz linux-2.6.24-openvz
```

but when I run "make menuconfig", there doesn't appear to be any OpenVZ related configuration available. It looks pretty much like a vanilla kernel.

What am I missing?

Regards,  
Cliff
