Kutschka wrote on Sun, 23 December 2007 18:22Hello,

I try to connect to VE-Mysql from VE.

(The VE-MySql is not reachable from outside/internet.)

VE: 192.168.1.1

VE-MySql : 192.168.1.2

I become the error:

"Error: 2003 (Can't connect to MySQL server on '192.168.1.2' (111))"

And for debug in the VE-MySql:

tcpdump -i venet0 dst port 3306

in the VE:

telnet 192.168.1.2 3306

=>Trying 192.168.1.2...

telnet: Unable to connect to remote host: Connection refused

I read the thread

<http://forum.openvz.org/index.php?t=msg&goto=8628&>

Quote:

...check iptables on the HN and the VE....

But what should I do with iptables? Do I need to route the port, even the mysqlVE is only internal reachable?

Thank you,
Kutschka

The iptables rules should be nothing.

Can you ping the host from inside?

Can you, from the mysql-ve, ping anything outside? Are you sure you set the IP address correctly?

Are you sure that mysql is started in the mysql-ve?
