kennethburgener wrote on Fri, 30 November 2007 11:57 Well that worked, sort of. I tried using vzyum to install the package and this did not resolve the issue. When I used yum locally on the VE it did. Are there know problems with vzyum? Does using yum locally on a VE cause any corruption?

I had the same problem with the fonts not working. I fixed it with:

```
cd /usr/X11R6/lib/X11/fonts  
mkfontdir misc 75dpi 100dpi
```

The post install scripts aren't working unless you install them like you did.
