Subject: vzyum and Fedora 7+, Python 2.5 workaround anyone? Posted by mhw on Thu, 27 Dec 2007 21:29:09 GMT

Hey all,

There's a problem with vzyum on Fedora 7 or Fedora 8 due to Python 2.5. This is the error:

ERROR: RPM python path not found: /usr/share/vzpkgtools/vzrpm44/lib/python2.5/site-packages

Looking in /usr/share/vzpkgtools/vzrpm4[34]/lib/ there is support only for python2.3 and python2.4 and not python2.5.

This is already been reported in bugzilla a couple of times, bugs 649 and dup 656.

Anyone got any suggestions for workarounds? I'm getting ready to manually install yum (which is a pain and maybe I should have installed yum into them all when I could still run vzyum) into each of my VMs since I can't update anything in any of them as is.

Mike
