Hi guys

I have faced this problem in Centos 5. I am trying to install yum on the geust os. However, I could not because of the following error.

[root@localhost ~]# vzyum 101 install yum
ERROR: No such OS template: install

I have googled it and i saw some solutions but they did not work. Most of the solutions taled about OS template metadata. But, i did not manage to find the metadata for centos 5. Any idea that can help me to solve this issue.

Thanks a lot
