hi all.

just start trying openvz.
i follow everything from the openvz wiki.

everything installed ok on latest updated centos 5.1
i can start and ping and enter and ssh into ve.

but, once inside ve, i dont have internet.
cant ping anywhere except the host.

in the wiki http://wiki.openvz.org/VE_creation
there's nowhere mention about routing or gateway.

i try to add default gateway inside ve:
\$ route add default gw 172.16.1.1
SIOCADDRT: Network is unreachable

where did i go wrong?

tia.
