Hi kir,

I've disabled vzmon un the mentioned script, but when I create a VE from a cache following the procedure, I get the following error message:

```
vzctl start 101
```

```
Warning: configuration file for distribution mandriva-2006-i386-minimal not found default used
```

```
Starting VE ...
```

```
VE is mounted
```

```
Invalid kernel, or some kernel modules are not loaded
```

```
VE start failed
```

```
VE is unmounted
```

Thanks for your help !!

Marc
