I did try to delete from node. What ever I did try was from node only and not from host.

fsck the entire node eh ? But wont that require me to unmount the vz partition ?

On another note, not sure whether I must open a another thread, can we use ping -I venet0:2 to ping from the secondary interface inside host ? ping -I sec.ond.ary.ip works and pings from proper secondary IP address instead of the default main host IP address in case of using the secondary interface name. It is for all vpses..Just checking whether there is anything I can do to fix it.
