The last line I see on the console is this:

```
input: AT Translated Set 2 keyboard as /class/input/input0
```

It seems strange that there are no messages in the /var/log/messages for every boot with this kernel

Before this message there are a couple of them that seems like a problem exists, but they also occur when it boots well with a different kernel:

```
powernow-k8: MP systems not supported by PSB BIOS structure  
powernow-k8: MP systems not supported by PSB BIOS structure  
powernow-k8: MP systems not supported by PSB BIOS structure  
powernow-k8: MP systems not supported by PSB BIOS structure
```

Please let me know if you need any additional information

Best regards

Fernando
