I would note that 'vzctl set --devices c:5:2:rw' command is not required.
First, it is not /dev/null device, it is /dev/ptmx
Second, this device file should have 0666 access permissions too. Obviously you have created it by mknod command, and write permission for user and group was restricted by umask.

Marat has corrected our wiki page, now it recommend to execute mknod with --mode option.

Thank you,
Vasily Averin
