dev wrote on Fri, 11 January 2008 13:57is it possible to get an access to check?
-17 means EEXISTS, so something wrong since kernel
thinks that some object already exists.
Maybe something messed with IDs (VEID, etc.)

You mean ssh access? sure, need to make some arrangements then though as I have the firewall configured to only let through sshd connects from my static IP. If you have a static ip or at least range that would make it easier. we can arrange that through privatemessage I guess.

Also look in my main thread about this (http://forum.openvz.org/index.php?t=msg&th=5125&start=0&) as I don't want to hijack this one
