you think any of these will run on Gentoo?

I have tried again with the Gentoo stable 2.6.18 kernel but I cannot make it deal with my sata.

As for 2.6.24 I am prepared to test it, even if it's unstable, in case I cannot get 2.6.22 to work. I am trying now with some alter in kernel config, noticed some diffs commpared to my test box where 2.6.22 seem to work. Proplem for me now is I need to take decision in less then 2 hours as I then can't get on place access untill monday in case it hangs, and with testing it's fair chance it does so... If my new compile doesn't work I probably will take home the server for further work although it mean an approx 48h downtime.

I simply must have this working.

/Joakim
