Hi,

1. Please check that in output of command 'arp -n' (on HN) there is an ip of your VPS.
2. Conduct this experiment:
- On HN: 'tcpdump -n host <YOUR_VE_ID>' then
- Enter inside VE and try to ping any host
- Please provide us with the output of tcpdump from HN.
3. And also 'vzctl --version' on HN
4. What kernel do you use?
