Subject: software RAID1 support on Centos 4.1?
Posted by speedzzz on Tue, 11 Apr 2006 03:57:19 GMT

Each time I install the Kernel on my Centos 4.1 box
with software raid1 I get the following message:

WARNING: No module mptbase found for kernel 2.6.8-022stab072.2, continuing anyway
WARNING: No module mptscsih found for kernel 2.6.8-022stab072.2, continuing anyway
WARNING: No module raid1 found for kernel 2.6.8-022stab072.2, continuing anyway

And it hangs at boot up.
Any suggestions?

Regards
GW
