Well it appear 2.6.18 kernel is a dead end for me. I have now tried with a vanilla-2.6.18 and it show same problem - it doesn't even try to load my nic's so there must be some kind of hw problem here.

So not sure which road to go now as 2.6.22 also seem to be a dead road due to being a frosen ovz tree, remains 2.6.24 but how unstable is it?
