We do not recommend to allow one VE to allocate more than 60% RAM

http://wiki.openvz.org/UBC_systemwide_configuration#Limiting_memory_allocations

On the other hand it looks like vmguar barrier is set incorrectly for n<15. I've fixed recently this issue recently and would recommend you upgrade vzctl package up to vzctl-3.0.22 version where this issue is fixed.

thank you,
Vasily Averin
