almost similar in your context.

AFAICS from our your posts you use 2.6.22, correct?
and have oopses/call traces. may worth filling in bug.

I have 2.6.22 yes, don't know about patrickweb. I have tried to use 2.6.18 but cannot boot as it refuses to see my sata disk as sda, whatever config I try, just hda and 33Mhz bus speed which mean I have to change my fstab to mount hda and if fail mean I cannot boot into other kernel I have for backup - so no choice really.

As 2.6.22 is frosen I don't know if it's any use to file a bug on it - I would rather like to go for testing 2.6.24 then.

I use 2.6.18-openvz-686.
