Subject: Re: /dev/pty always gone
Posted by vaverin on Tue, 15 Jan 2008 05:36:06 GMT

Of course, You can create persistent entries in /dev.
However the ways may be different for various VEs:
- if you do not have udev inside VE -- you can just create according device files directly in /dev/ directory.
- if your VE have running udev in this case you should create device file in some udev's configuration directory.

However I'm not sure that it is the cause of your issue. Could you please check that devpts is mounted inside VE?

Also it may be useful to look here http://wiki.openvz.org/VPS_enter_failed
and please tell us your kernel version.

thank you,
Vasily Averin
